

- Reorder main menu : Ingreso de datos, Tablero, Resumen, Empresa and Reports.

- Some emission factors are wrong, we used the wrong table (my mistake) can we fix this? I'll share the right table.

INGRESO DATOS.

- When applicable, show not only CO2 emission factor. Include all other gases even SF3, CHF, etc.

Scope 3.

- Categories C4, C6, C7 and C9. Again need a modification to register the value for the pasajero*km and vehículo*km.

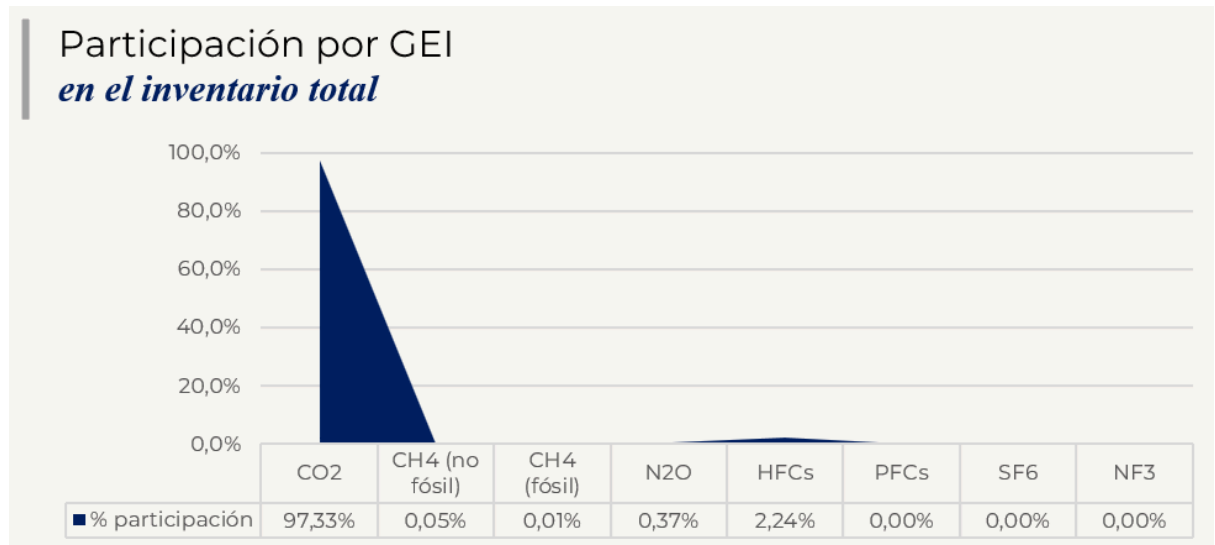

What we are suggesting is to use a template (let me know if it's better in excel or not) where users will be able to fill all the information and get a total value which will be introduced for these categories.

- We'll provide a table with the average prices for gasoline and diesel (category C6). Here I need the admin user to be able to add yearly average values for this.

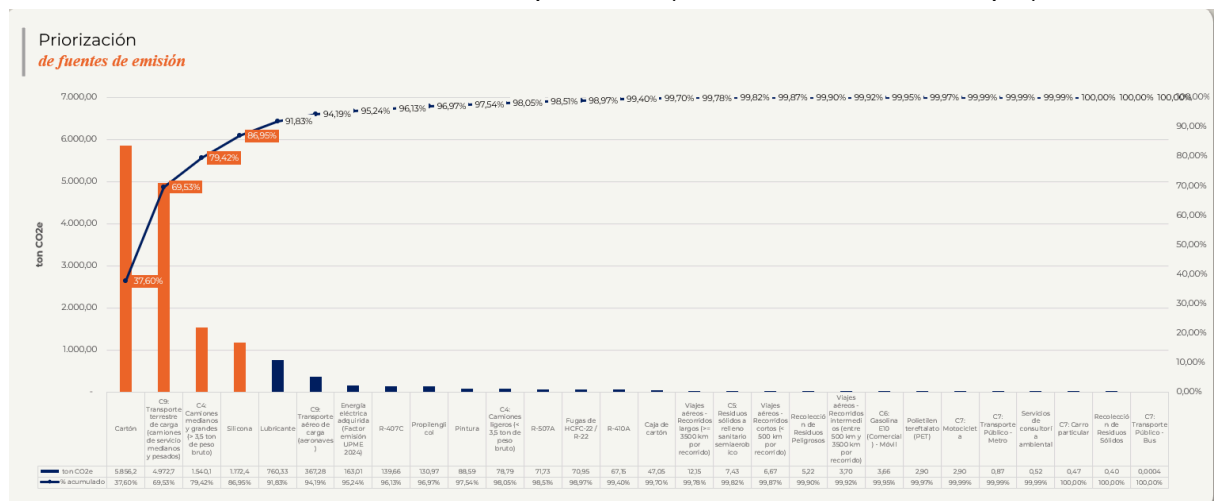

DASHBOARD.

- "Emisiones por gas GEI": Do not display "other" but show all of the gases separately (even SF3, CHF, etc.); also check CO2 and other gas calculations because they're

wrong. Change the chart for something like this:

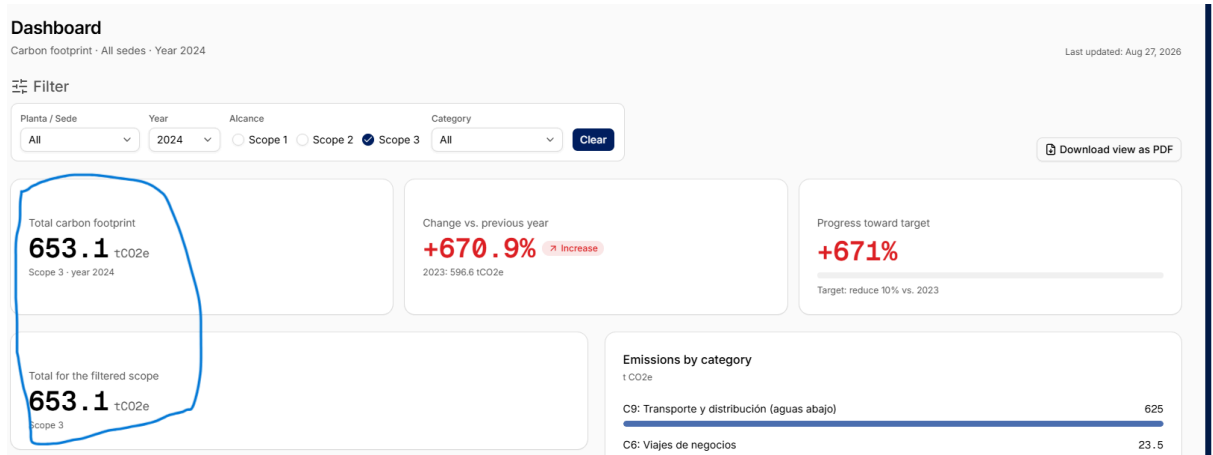

- Break down by each gas and please show the difference between fossil and non-fossil CH₄. The difference here is the biogenic. If biogenic, then CH₄ is non-fossil and non-biogenic is fossil.
- Scope 2 graph (monthly): Not an area graph. Please use a line and points chart. Not a continuous line.
- Pareto. Please keep all of the bars and lines the same color, only change the color for the elements which cumulative % is up to 85%. (As shown in excel example).

- Please use company information as header, I mean the first thing the user will visualize is their information.

- When filtering by any scope, the total carbon footprint is duplicated.

REPORT.

- Downloadable file need to be redone again. Look, we need header with company info, dashboard, emissions by category, Declaración consolidada GEI (ISO 14064-1) (see example below), not including summary and finally uncertainty table.

You can see it includes even scopes, categories, elements and emissions by gas all in one.
The example is a pivot table.
